# Using this manual

Thank you for choosing this Connected Inventions device. This device will provide you high-quality IoT with Connected Inventions' exceptional technology and high standards. This manual has been specially designed to guide you through the functions and features of your device.

## Read me first

- Before using your device, read the entire manual and all safety instructions to ensure safe and proper use.
- The descriptions in this manual are based on the default settings of your device.
- The images used in this manual may differ from the actual product.
- The contents of this manual may differ from software provided by service providers or carriers, and are subject to change without prior notice.
- Access the Connected Inventions website ([www.connectedinventions.com](http://www.connectedinventions.com)) for the latest version of the manual.
- Available features and additional services may vary by service provider.

- Applications on this device may perform differently from comparable applications and may not include all functions available (by ie. downlink messaging features)
- Connected Inventions is not liable for performance issues caused by third-party applications or improper installation.
- Please keep this manual for future reference.

## Malfunction

- In case of malfunction, deliver the device to the supplier. Do not open the cover.

## Transportation

- Do not remove packing material and do not repack the device unless necessary. Contact the shipping agent before transportation. Inside the device there is a battery which contains approximately 5.0 g of lithium.

## Disposal

- Return the device to a disposal station which collects electronics waste and batteries.

## Operation

- Protect the device from moisture, water, and dirt.

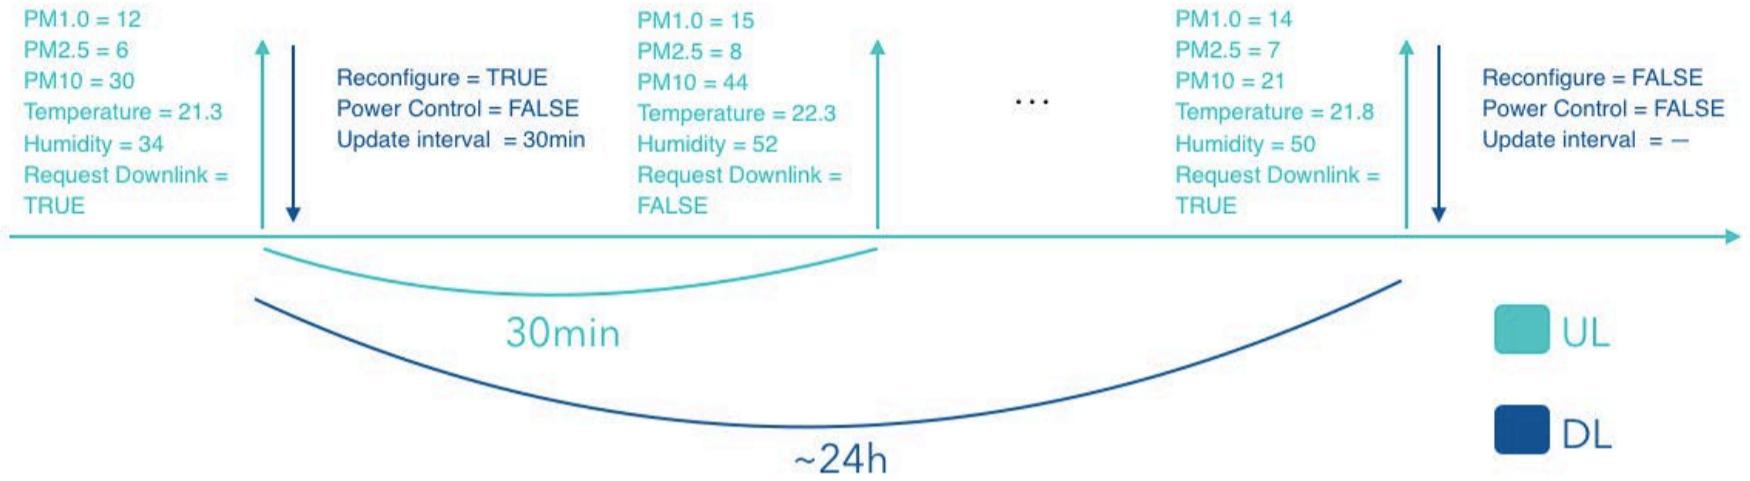

# About

Connected Inventions AirWits PM is a wireless air quality metering device with ultra long battery life. This intelligent and small device measures and sends the particular matter mass concentrations PM1.0, PM 2.5 and PM10 as ug/m<sup>3</sup> plus temperature and humidity data sequentially from 10 min to 24 hours using the world-wide Sigfox IoT-network connectivity for data transmission, enabling very low lifetime cost. The installation of the device is extremely simple procedure and requires neither special tools nor configuration operation. The device is maintenance free, and thus a great solution especially for long term indoor air quality metering providing accurate data for energy savings and comfortable living conditions which can be monitored remotely.

# Function

The basic functionality procedure example:

When the device is powered on, it will send the measurements and ask downlink message from the network. If the downlink message is configured and reconfigure bit is 1, new settings will be adopted. In case downlink message is not configured, the reconfigure bit is 0 or the downlink message cannot be read, the previous settings will remain. The transmission interval time and adaptive power control function can be set through downlink message. After the downlink request, the device sends only uplink messages for the next 24 hours. After every 24 hours, the device will send downlink request again within next payload transmission.

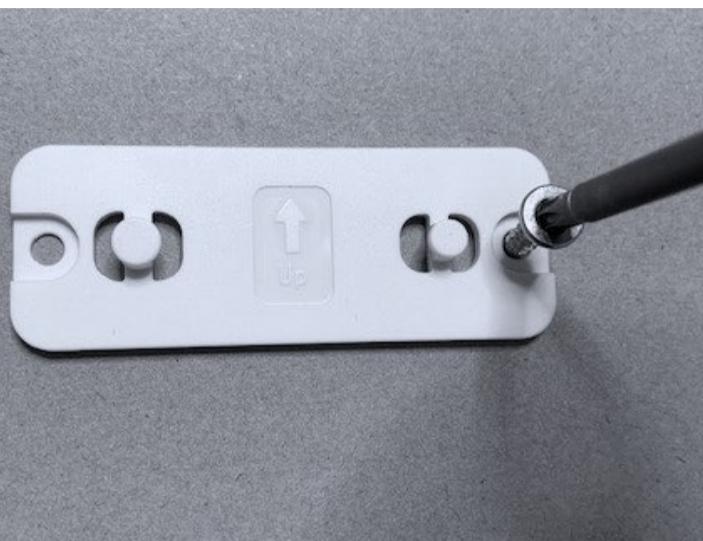

# Assembly & Installation

**1** Save the identifier and the key of the device. The identifier and the PAC key are on the label on the bottom of the device. You can also read the identifier and the PAC key using the QR code.

**2** Switch the device on by sliding the power switch to position "1".

**3** Install the wall plate to the wall using screws suitable for the wall material. Please note the orientation!

**4** Attach the device to the wall having the pins meeting installation holes in the device.

**!** Please note the orientation!

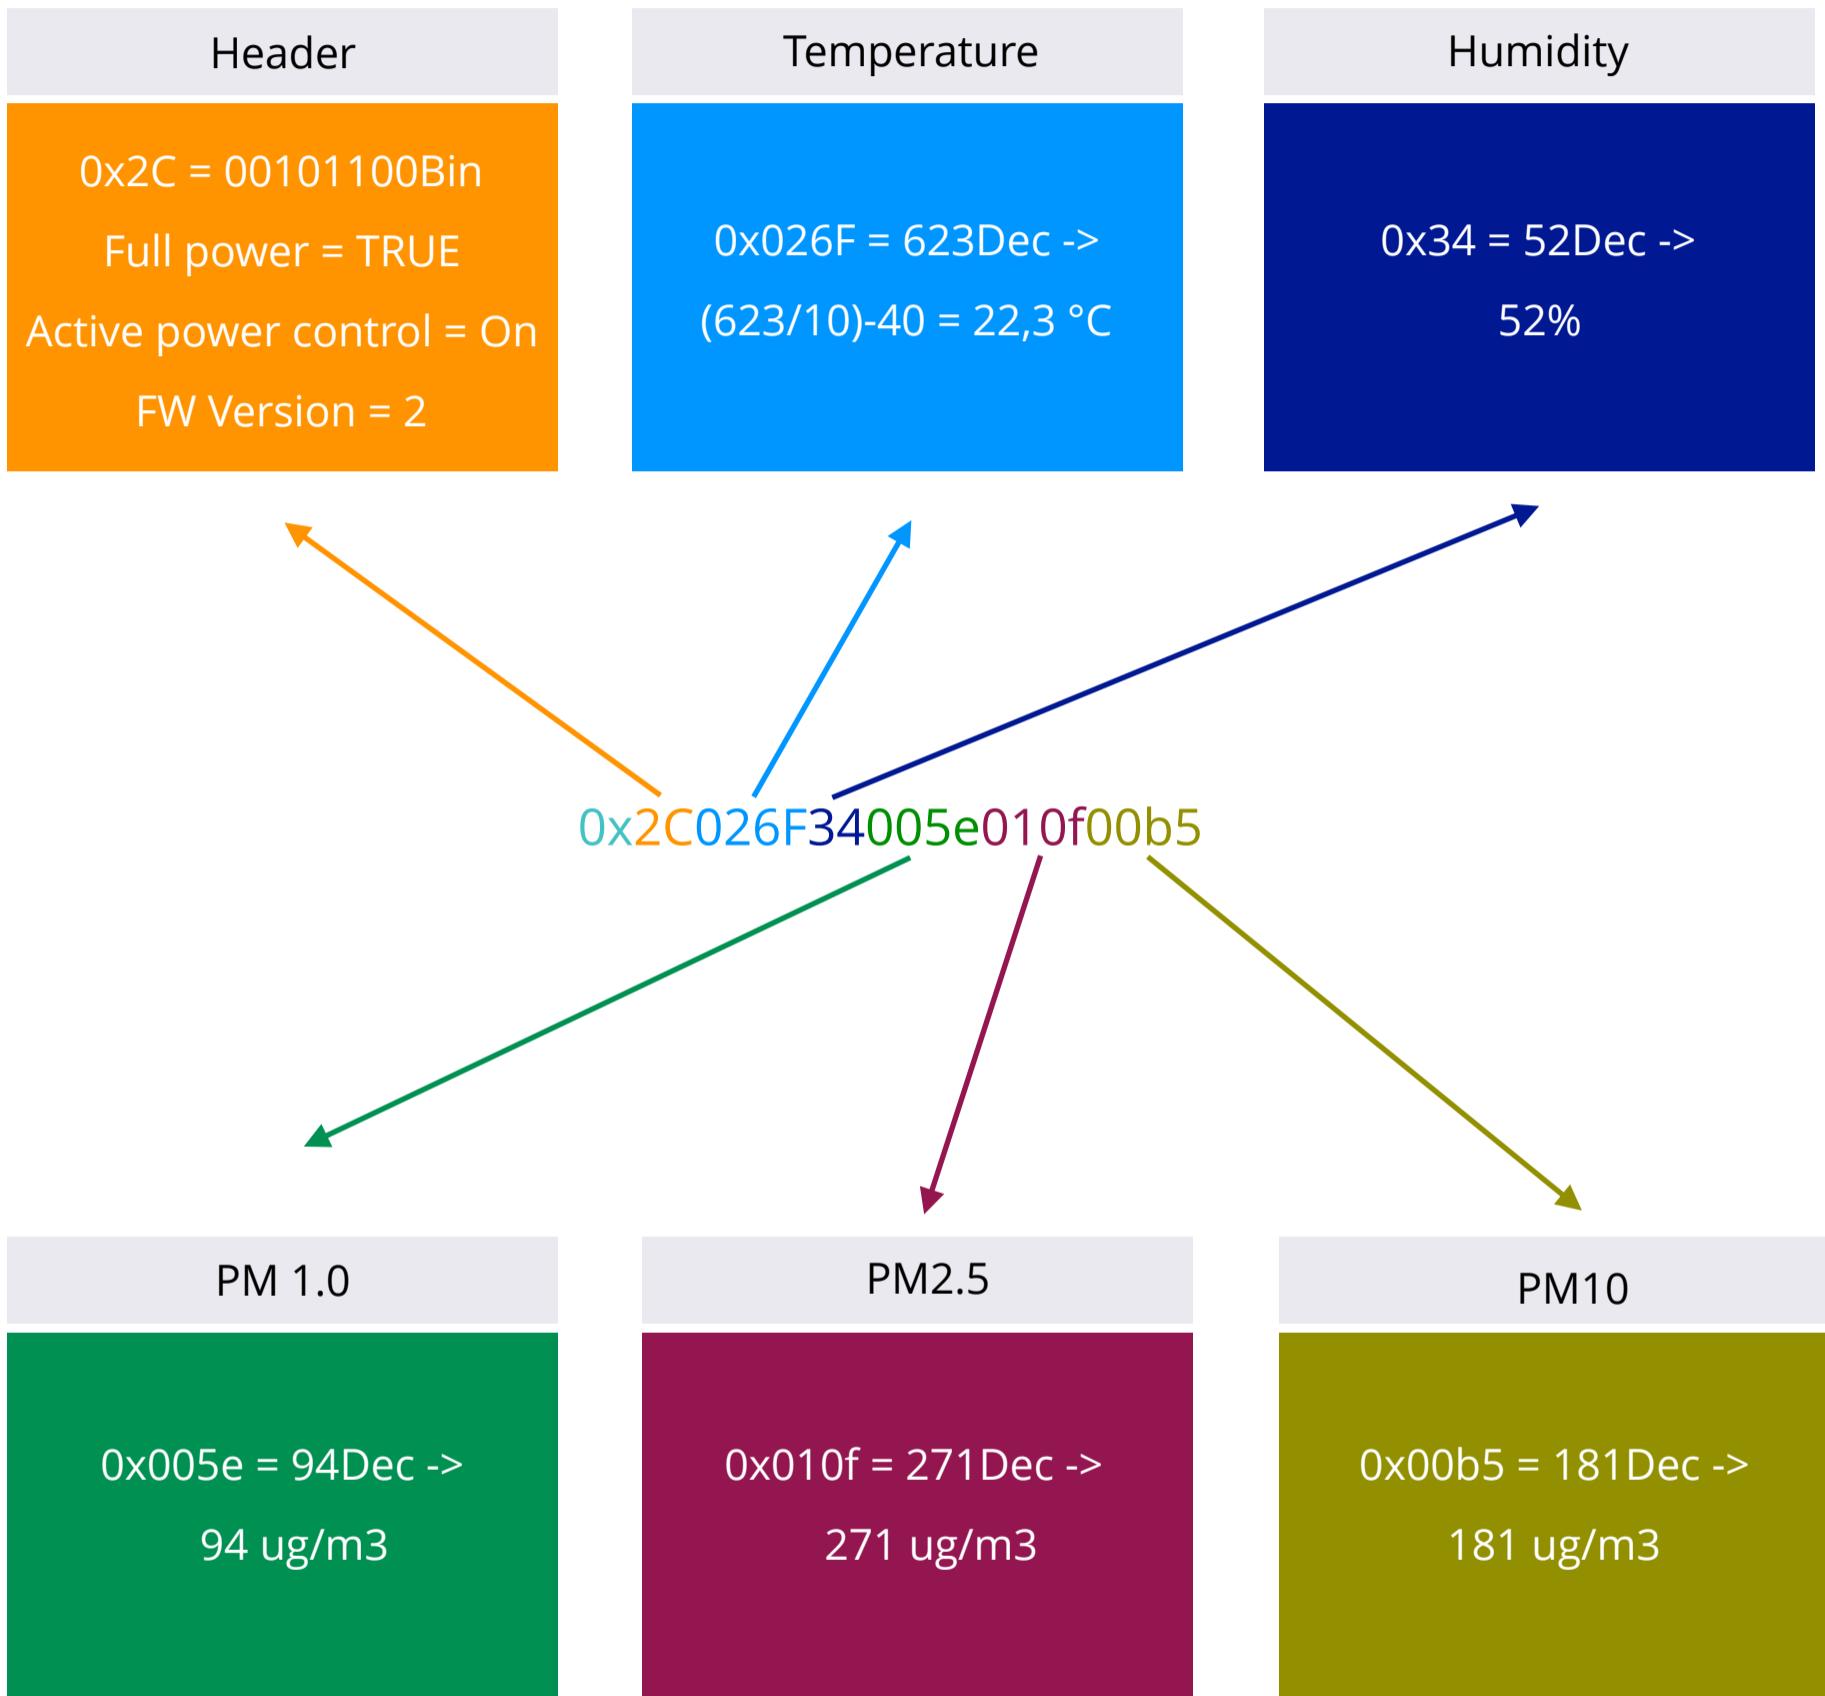

**!** Please note! Avoid placing device closer than 15cm from any metal or magnetic object, electric cables, electric devices or selective glass as this will dramatically reduce radio performance as well as battery life of the device.

# Replacing Batteries

**!** Please NOTE! The device uses battery pack proprietary made. If the battery is considered dead, please contact Connected Inventions support for the replacement. Do not try to replace the battery with other brands available as there is a great risk of breaking the device. The battery should last years so in case of no reception, first check the power is switched on and that the radio coverage is available at the very location.

## Uplink: Payload description

BYTE	BIT	TYPE	NAME	DESCRIPTION
0	0-1	UInt2	Reserved	Reserved
0	2	Boolean	Transmit power	Full power mode. 1= TRUE, 0 = FALSE
0	3	Boolean	Power Control	Active power control. 1= On, 0 = OFF
0	4-7	UInt4	FW version	FW version
1-2	0-15	UInt16	Temperature	(Value /10) - 40 = Temperature [°C] (Value /18) - 8 = Temperature [°F]
3	0-7	UInt8	Humidity	Humidity [%]
4-5	0-15	UInt16	min TVOC	Mass concentration [ug/m3]
6-7	0-15	UInt16	max TVOC	Mass concentration [ug/m3]
8-9	0-15	UInt16	average TVOC	Mass concentration [ug/m3]

# Downlink

- Settings of the device can be updated with the downlink message
- Device requests new settings approximately every 24 hours
- You must be very careful when you update the settings
  - settings affect both the subscription and the battery life of the device!
- Downlink message is optional
  - If any downlink message is not received, device continues with the current settings
- How often messages are sent can be adjusted with the settings
- Default settings when device has not been configured with downlink:
  - Uplink reporting period is 30minutes
  - Adaptive Power Control is OFF
  - Full transmit power is used
- If the Adaptive power control feature is set on, the device will automatically adjust the transmit power to optimum level to save battery and create less unnecessary interference to radio network
  - By default power control is OFF
  - When power control is OFF, full TX power is used

! **NOTE! The Adaptive power control feature is available only in RCZ1 device**

## Downlink: Payload description

BYTE	BIT	TYPE	DESCRIPTION
0	0-5		Reserved, set to 0
0	6	Boolean	Active power control. 1= On, 0 = Off
0	7	Boolean	DL Reconfigure enable 1= TRUE, 0 = FALSE
1	0-7	Uint8	Update interval. 5 min * (n+2) → 10min ... ~24h. Refer to Appendix 1.
2-7	all		Reserved, set to 0

# Troubleshooting

- Ensure the power is switched on
- Check there is Sigfox network coverage available
- Ensure the device is not installed near metallic objects, electric cables, electric devices or selective windows.
- Metallic roofs, steel reinforced concrete, underground location and other obstacles can dramatically reduce radio signal.
- Check the operation mode of the device.
- Incorrect downlink configuration will affect the behaviour of the product.
- Ensure the configuration is properly done.

# Technical Specification

<b>Description</b>	AirWits PM is a wireless IoT particulate matter, temperature and humidity metering device.
<b>Size</b>	98 x 98 x 43 mm
<b>Weight</b>	248 g
<b>IP rating</b>	IP20
<b>Batteries</b>	1xD 3.6 V LiSoCl2
<b>Battery capacity</b>	19000 mAh
<b>Battery life</b>	5 years with 30 min measuring interval
<b>Sensors</b>	Sensirion SPS30, SGPC3
<b>Environment</b>	Temperature -10 ... +60 °C Humidity 0 ... 95 % PM 0 ... 1000 ug/m3
<b>Radio configurations</b>	Sigfox 868 MHz (RCZ1), 902 MHz (RCZ2), 920 MHz (RCZ4)
<b>Antenna</b>	Internal helical antenna
<b>Communication</b>	Uplink & Downlink
<b>Certification</b>	FCC, CE, Sigfox Class 0U P_010A_9516_01 (RCZ1) P_010A_6C77_01 (RCZ2) P_010A_88EC_01 (RCZ4)
<b>Product Code</b>	CIPMM-3014-R0201 (RCZ1) CIPMM-3214-R0201 (RCZ2) CIPMM-3414-R0201 (RCZ4)
